Enzymed / Qrzet / Statement of experience

Used for:

- * Better Healing for endoprothetics
- * Thrombosis prophylaxes/ prevention
- * Better Blood circulation
- * Strengthening of immune system
- * Fibromyalgia
- * Vertebrogene Diseases (diseases from spine)
- * Problem of circulation and Vein problems
- * Extrapiramidale diseases (neurological problems)

We applied the system programs as advised in the manuals.

Patients experienced very fast reaction, (in sense of more pain, as a sign of the starting healing process) and getting better as a reaction after 2 weeks or 3 weeks of treatment.

We recommend the therapy for acute cases, also in a combination with medication and physical therapies.

For chronically diseases we expect good results in future.
